Finance tracker website
Project Presentation

What we are making

- For our project, we are creating a money tracking app that helps people keep track of their spending and manage their finances better. It will have representations, like pie charts or bar graphs to show users where their money is going. Whether it's, for food or entertainment or utilities. The goal of the app is to provide users with real time analysis and budgeting features so they can make choices, cut down on unnecessary spending and reach their savings targets.

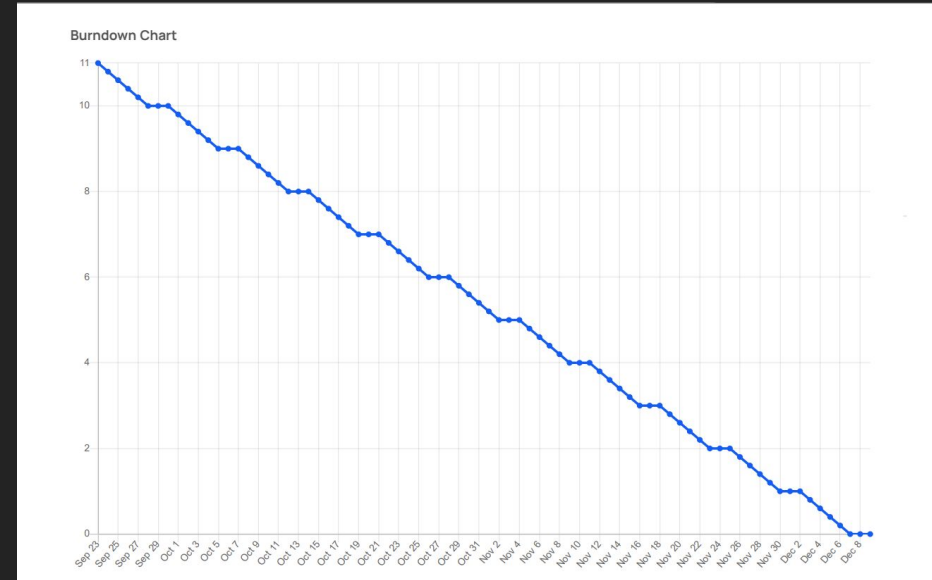

TRIPS

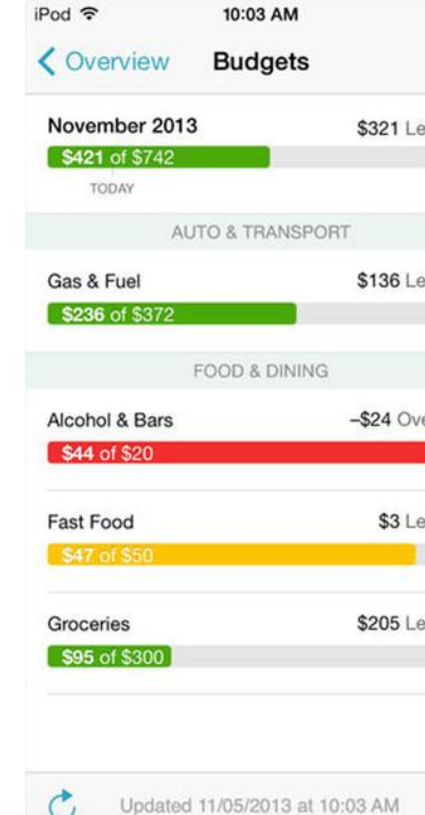

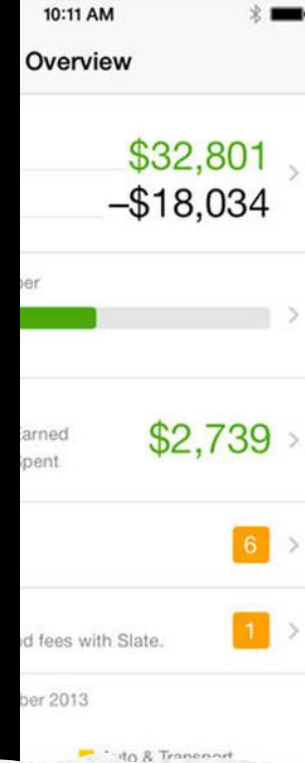

Burn Down chart

How are we tracking things?

- What we are using to track is known as a Burn Down Chart
- With a Burn Down Chart, this chart helps us to visualize our progress toward completing our financial tasks
- This chart will show how much work remains compared to our time available

Our project so far!
