# SpendRight!
- GPJ

A budget-tracking website!

Developed by:
Gabriel Shall
Paige Brasfield
Jaylon Daniels

Our project is a budget tracking website that allows users to input their spending and keep track of it in a table as well as have it displayed on a graph.

Timing goals

- We hit the main focus
- We didn't really get to everything we wanted to due to timing.

Jira

What's changed

- We wanted users to be able to have set inputs such as rent, subscriptions and income so users can just add other expenses to see their left over and how much they spend

Challenges in SE development

- Time management
    - Let time get the best of us
- Figuring out how to add certetian code and finding a data base at times
